

## **Sprint Backlog**

1. When a search is submitted, it should create word cloud of the top X number of papers in the ACM and IEEE digital library that match the provided criteria
2. For the paper list, allow users to select a subset to generate a new word cloud from
3. For each paper, clicking on a paper's title will allow the user to read the abstract with the word(s) highlighted and access for download a PDF version of the paper with the word highlighted in the PDF
4. Allow for the downloading of an image of the generated word cloud
5. Update design
6. Add necessary PHPUnit tests
7. Add necessary Behat tests
